

# Diplomado Avanzado de Java (J2EE & Struts)

**Objetivo:**

Nuestro Diplomado Avanzado de Java tiene como finalidad enseñar a los alumnos que ya conocen Java diferentes estructuras (frameworks) o tecnologías relacionadas con Java que permiten enriquecer una aplicación. Estas tecnologías centrales son Struts, Web Services y EJB.

**Dirigido a:**

Desarrolladores con experiencia en Java (J2SE, Servlets, JDBC y JSP) que desean profundizar en otras tecnologías de Java y mejorar sus desarrollos actuales.

**Requisitos:**

Conocimientos de HTML, Java, JDBC, Servlets y JSP o haber tomado nuestro **Diplomado de Programación Java (J2SE y J2EE)**

**Estructura del diplomado:**

Uso del IDE Net Beans	8 o 12 horas (Módulo gratis a los alumnos inscritos al diplomado)
Struts	24 horas
Web Services	24 horas
EJB	32 horas
Aplicación	20 horas
Total:	108 a 112 horas

**DCInternet**

## STRUTS (24 HORAS)

**Descripción:** En este módulo el alumno usará Java Struts como una estructura (framework) para desarrollar aplicaciones Web que sigan el patrón de diseño Model/View/Controller.

### STRUTS OVERVIEW

- Objectives of Struts
- Where Does Struts Come From?
- Underlying MVC Architectural Components
- Model 1 Design Pattern
- Model 2 / MVC Design Pattern
- Implementing MVC with a Framework
- What is Struts?
- Basic Struts Components
- Struts Documentation
- A Struts-Based Application: Logon

### MEETING ADDITIONAL APPLICATION REQUIREMENTS

- Java's MessageFormat Class
- Using MessageResources
- Techniques for Formatting Data
- Preventing Duplicate Form Submits
- Using ForwardAction and IncludeAction
- DispatchAction
- Configuring LookupDispatchAction
- JSP Buttons for LookupDispatchAction
- Extending LookupDispatchAction

### STRUTS IN A SIMPLE WEB APPLICATION

- Stars Information Application
- List Stars Flow
- Display Star Flow
- ActionServlet: the Controller
- struts-config.xml
- ActionForm: Form State
- The execute Method of Action
- The execute Method of StarsDisplayAction
- Directing Flow of Processing with an ActionForward
- Building a View with Struts Tags
- Using Struts Taglibs in a JSP
- The struts-blank.war: A Good Place to Start
- Review: Flow through a Typical Struts-Based Application

### HANDLING ERRORS

- Error Handling Options with Struts
- Documenting Errors with ActionError
- JSP Error Pages
- Declarative Java Exception Handling
- Logging in Struts

### VALIDATION

- Validator Overview
- Validator Requirements
- Configuring Validator Rules
- Struts Validators
- Configuring the Struts Validators
- Configuring Form Validation: validation.xml
- Validator Rules Usage
- Validation with Regular Expressions: The mask Rule
- ValidatorForm versus ValidatorActionForm
- Multiple Page Input with the Validator
- Implementing a Validator Method
- Other Validator Implications

### THE CONTROLLER

- ActionServlet as a Controller
- RequestProcessor
- Developer Responsibilities
- Mapping
- Forwards
- Lifecycle of an ActionForm
- ActionForm Considerations
- The validate Method

### PAGE COMPOSITION WITH TILES

- Tiles Overview
- Building a Tiles Template
- Basic Tiles Example
- Tiles Definitions
- Additional Options with Definitions
- Placing Definitions in a Configuration File
- Using the <put> Tag
- Defining Attributes with <putList>, <add>, <bean>, and <item> Tags
- A Tiles Controller
- Enabling the Tiles Plug-In
- Using Tiles

### ACTION AND THE BUSINESS MODEL

- The Role of an Action
- The execute Method of Action
- Threading Considerations
- execute() Method Considerations
- Handling an Error
- Some Best Practices for Action
- More Best Practices for Action

## THE VIEW

- Forwarding to a View
- Overview of Struts Tags
- Struts HTML Tags
- Form Related Tags
- Struts Bean Tags
- Some Bean Tags
- Struts Logic Tags
- Logic Tag Commonalities
- The <iterate> Tag
- Logic Tag Examples
- Some Struts View Best Practices

## ADDITIONAL VIEW AND FORM SUPPORT

- More HTML Tags
- Dealing with URLs
- Using Error Tags
- Internationalization with Struts Tags
- Accessing Bean Properties
- DynaActionForm: A Configurable Form
- Indexed and Mapped Properties in a Form

## WEB SERVICES WITH JAVA (24 HORAS)

**Descripción:** En este módulo aprenderá como desarrollar aplicaciones Web Services con Java y el kit de Desarrollo Java Web Services. Los tópicos iniciales cubren las tecnologías y arquitecturas básicas como XML y después se hace énfasis en un desarrollo práctico de esos conceptos en un ambiente Web distribuido.

### INTRODUCTION TO WEB SERVICES

- What is a Web Service?
- Service-Oriented Architecture
- Distributed Applications
- Traditional Web Technologies
- XML and Java
- Web Services Structure
- Why Web Services?
- Web Services Architectures
- RPC and Document Styles
- Web Service Initiatives

### UDDI AND JAXR

- The UDDI Project
- Taxonomies in UDDI
- APIs and object model
- Universal Business Registry
- JAXR
- The Inquiry API
- Private Registries
- The Publishing API

### JAVA AND XML

- JAXP
- Parsing XML with SAX
- Event Handling
- Parsing XML with DOM
- The Document Tree
- Nodes
- Validating XML
- Transformations
- Generating XML
- JAXB

### WEB SERVICES AND J2EE

- J2EE Architectures
- Standard J2EE Protocols
- The Enterprise JavaBean
- Compile
- Package
- Package (cont'd)
- Deploy
- Client

## CASE STUDY

### BASIC SOAP AND JAX-RPC CLIENTS

- SOAP Overview
- The SOAP Envelope
- SOAP Over HTTP
- RPC and Document styles
- JAX-RPC
- A SOAP Client
- config.xml and wscompile
- The Client Program

- The Case Study Application
- Presenting the User Interface
- The Web Application Layer
- Completing the Web Application
- EJB components
- EJBs and persistence
- Packaging EJBs
- Adding a Web Service
- Deploying the Application

### JAX-RPC SERVERS

- A SOAP Server
- The Service Interface and Implementation
- config.xml and wscompile
- Generated Files
- Packaging the Application
- Deploy

### APPENDIX A - SECURITY IN WEB SERVICES

- Security Requirements for Web Services
- Encryption
- Digital Signatures
- Single Sign-on and SAML
- Access Control and XACML

### DESCRIBING WEB SERVICES WITH WSDL

- The WSDL Meta-Language
- WSDL Structure
- Services and Ports
- Bindings and Port Types
- Data in Messages
- Creating WSDL
- The Process

### SOAP AND SAAJ API

- Data Types for JAX-RPC
- Message handlers
- Actors and SOAP headers
- SOAP encoding
- SAAJ
- Attachments
- Building attachments
- A Document Server
- JAXM
- Using JAXM

## ENTERPRISE JAVABEANS (32 HORAS)

**Descripción:** Explores the Enterprise JavaBean (EJB) Component Architecture for building multi-tier client/server applications. Java programmers will be able to write and deploy reusable, distributed components and take advantage of the services offered by the EJB infrastructure.

### EJB AND THE J2EE ARCHITECTURE

- Evolution of Distributed Computing on the Web
- The J2EE Solution
- The Enterprise JavaBean
- Roles in Enterprise JavaBeans
- Development
  - EJB Container and Application Server
  - Reference Implementation Services

### BEAN-MANAGED PERSISTENCE

- Why BMP?
- Create
- Remove
- Load
- Store
- EjbFindByPrimaryKey and other Finder Methods
- DObjects

### GETTING STARTED

- Defining the Bean Class
- Remote Interface
- Writing Business Methods
- Home Interface
- Compiling
- Creating the J2EE Application
- Packaging the Enterprise Bean
- Deploying the J2EE Application
- The Client
- Locating the Bean
- Create an Enterprise Bean Instance
- Invoking the Bean's Methods
- Compiling the Client
- Deploying the Client
- Running the Client

### CONTAINER-MANAGED PERSISTENCE

- Why CMP?
- Two Layers of Responsibility
- Coding Conventions in the Abstract Entity Bean
- Deploying a CMP Bean
- ejb-jar.xml
- Proprietary Deployment Descriptors
- Container-Managed Relationships
- EJBQL: Finders in CMP
- Limitations of CMP

### TRANSACTIONS

- Transactions in EJB
- Container-Managed Transactions
- Transaction Support Attributes
- Bean-Managed Transactions
- SessionSynchronization

### THE JAVAX.EJB PACKAGE

- The Remote Interface
- The Home Interface
- The Local Interface
- The Local Interface Usage
- Container Objects
- SessionBean Interface
- EntityBean Interface
- MessageDrivenBean Interface
- EJB Exceptions
- EJB Context
- Three Contexts
- Other Interfaces

### EJB SECURITY

- Security Issues
- Authentication
- Deploying a Secure Bean
- Authorization
- Container-Managed Security
- Security and Deployment Descriptor
- Bean-Managed Security
- Bean-Managed Security and Deployment Descriptor

## SESSION BEANS

A Session Bean  
What About State?  
Stateless Session Beans  
Life Cycle of a Stateless Session Bean  
Stateful Session Beans  
Life Cycle of a Stateful Session Bean  
HttpSessions and Cookies

## DEPLOYMENT

EJB Deployment Process  
Anatomy of the Deployment Descriptor  
Structural Data  
Assembly  
Environment Entities  
Compile  
Bundling

## EJB CLIENTS

Client Types  
Web Components  
The JNDI API  
Lookup with JNDI  
PortableRemoteObject.narrow()  
Using the Bean

## ENTITY BEANS

An Entity Bean  
Persistence Models  
EntityBean Home Interface  
Finder Methods  
Primary Key  
The Component Interface  
Session Bean Clients  
Life Cycle of an Entity Bean

## JMS

Introduction to JMS Concepts  
What is JMS?  
Parent Interfaces and GMD  
JMS Definitions  
Message Object  
Multi-Threading and JMS Exception  
PTP Domain and Interfaces  
Pub/Sub Domain and Interfaces  
JMS Server and Destination  
Creating the Client  
Handling the Message  
Producing the Message

## MESSAGE-DRIVEN BEANS

Message-Driven Beans  
Asynchronous Processing  
Comparing MDBs  
MDB Interfaces  
Deploying MDBs  
MDB Deployment Descriptor Elements

## APPENDIX A - SUPPORTING TECHNOLOGIES

JDBC  
XML  
RMI  
Servlets  
Database Transaction Isolation Levels  
The JSP Solution

## Software a Utilizar

- ❖ Java Development Kit (JDK), Version 1.5
- ❖ Struts Framework
- ❖ JBoss Application Server
- ❖ Apache Http Server

## Material a utilizar:

- ❖ Una mochila de la empresa para ambos cursos
- ❖ Un manual de Struts
- ❖ Un manual de Web Services
- ❖ Un manual de EJB
- ❖ Un lápiz para hacer anotaciones

## IMPORTANTE

- *El precio del cuadro no incluye IVA.*

### **Formas y condiciones de pago:**

Para la inscripción, aplicación de los descuentos y aseguramiento de que el diplomado se impartirá en las fechas pactadas se requiere el pago anticipado antes con depósito o transferencia bancaria a la siguiente cuenta:

- ❖ Depósito en Banamex cuenta 4923239 Suc. 575 a nombre de Desarrollo y Capacitación en Internet, S. A. de C. V. (CLABE en caso de transferencia electrónica vía Internet 002180057549232394)
- ❖ O cheque a nombre de Desarrollo y Capacitación en Internet, S.A. de C.V.
